

Secure Digital Signature at Its Best: Notarius Is the Only North American Public Key Infrastructure (PKI) Certification Centre with ISO 27001 Certification

MONTREAL, CANADA, June 21, 2010 – Notarius announced today that NSF International recertified the Quebec Certification Centre (CCQ) with the ISO 27001:2005 Certificate. The CCQ is Notarius' public key infrastructure (PKI) certification centre used to manage and protect the digital signature of its customers. Notarius has always shown its leadership in the field of public key infrastructure, and even more since 2007 when its certification centre became the first in North America to receive the ISO 27001:2005 certification. Today, Notarius is still the only certification center in North America with ISO 27001 and only a handful of certification centres worldwide has achieved such a high security standard.

ISO 27001 ensures that Notarius' certification centre uses the highest levels of information security, thus providing added value and greater peace of mind to all its customers and partners. ISO 27001 is an international standard that formally specifies a management system intended to bring information security under explicit management control. It requires a systematic examination and management of information security risks while taking into account threats, vulnerabilities and impacts.

"Professionals from all industries understand the unique value of their digital signature; they expect their public key infrastructure provider to use the highest levels of information security management systems in the industry," says Claude Charpentier, Notarius' General Manager. "The ISO 27001 recertification shows our sustained commitment towards achieving the highest standards of professional practice, and positions us as the first and only PKI certification centre in North America with ISO 27001 certification."
